

CTA | Simplify Managed Futures Strategy ETF

FUND OVERVIEW

The **Simplify Managed Futures Strategy ETF (CTA)** seeks long-term capital appreciation by systematically investing in commodity and financial futures (excluding equities and currencies) in an attempt to create an absolute return profile that also has a low correlation to equities and can provide support in risk-off events.

To this end, CTA deploys a suite of systematic models that have been designed by Altis Partners, a commodity trading advisor with over 20 years of experience.

PERFORMANCE REVIEW

CTA put up its 2nd consecutive strong quarter in 2Q, returning just under 9% and outperforming most market sectors including equities, the 60/40 blended portfolio, and its trend benchmark. A consistent underweight in the U.S. and Canadian fixed income, along with timely positioning in copper and a couple of agricultural commodities were the major contributors. Precious metals and energy ended up as minor drags on performance in the quarter after having added to returns earlier in the year. Positioning across assets during 2Q generally resulted in positive carry due to the shape of individual bond and commodity curves.

The fund continues to exhibit zero to negative correlation with equities in contrast to its peers which run direct positioning in stocks. Our view is that a recent increase in the number of assets traded within the fund (still all within rates and commodities) should allow CTA to better capitalize on trend opportunities and improve diversification.

Performance as of 06/30/24 | Inception Date: 03/07/22

	CUMULATIVE TOTAL RETURN				ANNUALIZED TOTAL RETURN	
	3 Mo	6 Mo	YTD	Since Inception	1 Year	Since Inception

FUND DETAILS

Gross Expense Ratio	0.78%
Net Expense Ratio	—
SEC 30-Day Yield	3.33%
SEC 30-Day Yield Unsubsidized	3.33%

DEFINITIONS

Backwardation: The pattern of higher futures prices for shorter expiration futures contracts.

Contango: The pattern of higher futures contract prices for longer expiration contracts.

Market Price: The current price at which shares are bought and sold. Market returns are based upon the last trade price.

NAV: The dollar value of a single share, based on the value of the underlying assets of the fund minus its liabilities, divided by the number of shares outstanding. Calculated at the end of each business day.

Risk-Off: A model that looks to protect the portfolio from an equity drawdown by quickly buying bonds in weaker equity markets and remaining out of bond in stronger equity markets. This is distinct from a long bond trend signal given its typically shorter forecasting horizon and reliance on equity index signals rather than a bond signal.

SEC 30-Day Yield: The yield is calculated with a standardized formula and represents net investment income earned by a fund over a 30-day period, expressed as an annual percentage rate based on the fund's share price. The yield includes the effect of any fee waivers and/or reimbursements. Without waivers, yields would be reduced. This is also referred to as the "standardized yield", "30-Day Yield" and "Current Yield". The unsubsidized SEC 30-Day Yield does not reflect the effect of any fee waivers and/or expense reimbursements.

IMPORTANT INFORMATION:

Investors should carefully consider the investment objectives, risks, charges and expenses of Exchange Traded Funds (ETFs) before investing. To obtain an ETF's prospectus containing this and other important information, please call (855) 772-8488 or view or download a prospectus online. Please read the prospectus carefully before you invest.

An investment in the fund involves risk, including possible loss of principal.

The fund is actively-managed and subject to the risk that the strategy may not produce the intended results. The fund will also rely on the Futures Adviser's judgments about the value and potential appreciation of particular securities which if assessed incorrectly could negatively affect the Fund.

The Fund's use of futures may involve different or greater risks than investing directly in securities and the contract may not correlate perfectly with the underlying asset. These risks include leverage risk which means a small percentage of assets invested in futures can have a disproportionately large impact on the Fund. This risk could cause the Fund to lose more than the principal amount invested. Futures contracts may become mispriced or improperly valued when compared to the adviser's expectation and may not produce the desired investment results. The Fund's exposure to futures contracts is subject to risks related to rolling. Extended periods of contango or backwardation can cause significant losses for the Fund. Any short sales of the futures contracts by the fund theoretically involves unlimited loss potential since the market price of securities sold short may continuously increase.

Investments linked to commodity or currency futures contracts including exposure to non-U.S. currencies can be highly volatile affected by market movements, changes in interest rates or factors affecting a particular industry or commodity. Changes in currency exchange rates can be unpredictable or change quickly which will affect the value of the Fund.
