

SPYC | Simplify US Equity PLUS Convexity ETF

FUND OVERVIEW

The **Simplify US Equity PLUS Convexity ETF (SPYC)** seeks to provide capital appreciation by offering US Large Cap exposure while aiming to boost performance during extreme market moves up or down via a systematic options overlay.

The fund's core holding gives investors low-cost, index-based exposure to US large caps. A modest option overlay budget is then deployed into a series of options positions that help create convexity in the fund.

PERFORMANCE REVIEW

The S&P 500 Index was up 4.28% during the second quarter. SPYC underperformed its benchmark by 0.52%.

Regarding its long puts overlay, the fund had a negative contribution of ~0.4% from the options expiring worthless, in line with the steady state expected quarterly burn rate. We remained in a higher notional structure, spread across the next three monthly expiries to take advantage of the low volatility environment

On the other hand, the long calls also contributed negatively, approximately -0.1%, due to the decline in the equity market at the start of the quarter causing the calls to give back some of their unrealized value from the previous period. However, the calls started to regain most of their value as the market went back up to new highs by the end of the quarter, helping to reduce the gap initially created by the drawdown.

Performance as of 06/30/24 | Inception Date: 09/03/20

| | CUMULATIVE TOTAL RETURN | | | | ANNUALIZED TOTAL RETURN | |
|--------------------------|-------------------------|--------|--------|-----------------|-------------------------|-----------------|

DEFINITIONS

Call Spread: Buying a call on a strike and selling another call on a higher strike of the same expiry.

Convexity: A measure of how the duration of a bond changes as interest rates change. The greater the convexity of a bond, the greater that change will be for a specific interest rate shift.

Expiry: The time until an option expires. In the context here expiry is used to describe the length of time from when an option position is initiated to when it will expire.

Market Price: The current price at which shares are bought and sold. Market returns are based upon the last trade price.

NAV: The dollar value of a single share, based on the value of the underlying assets of the fund minus its liabilities, divided by the number of shares outstanding. Calculated at the end of each business day.

Option: An option is a contract that gives the buyer the right to either buy (in the case of a call option) or sell (in the case of a put option) an underlying asset at a pre-determined price ("strike") by a specific date ("expiry"). An "outright" is another name for a single option leg. A "spread" is when options are bought at one strike and an equal amount of options are sold at a different strike, all at the same expiry.

SEC 30-Day Yield: The yield is calculated with a standardized formula and represents net investment income earned by a fund over a 30-day period, expressed as an annual percentage rate based on the fund's share price. The yield includes the effect of any fee waivers and/or reimbursements. Without waivers, yields would be reduced. This is also referred to as the "standardized yield", "30-Day Yield" and "Current Yield". The unsubsidized SEC 30-Day Yield does not reflect the effect of any fee waivers and/or expense reimbursements.

| | |
|--------------------------------------|-------|
| Gross Expense Ratio | 0.52% |
| Net Expense Ratio | — |
| SEC 30-Day Yield | 0.82% |
| SEC 30-Day Yield Unsubsidized | 0.82% |

IMPORTANT INFORMATION:

Investors should carefully consider the investment objectives, risks, charges, and expenses of Exchange Traded Funds (ETFs) before investing. To obtain an ETF's prospectus containing this and other important information, please call (855) 772-8488, or visit SimplifyETFs.com. Please read the prospectus carefully before you invest.

An investment in the fund involves risk, including possible loss of principal.

The fund is actively-managed is subject to the risk that the strategy may not produce the intended results.

The use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) the risk that the counterparty to a derivative transaction may not fulfill its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, rate, or index. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. The use of leverage by the Fund, such as borrowing money to purchase securities or the use of options, will cause the Fund to incur additional expenses and magnify the Fund's gains or losses. The earnings and prospects of small and medium sized companies are more volatile than larger companies and may experience higher failure rates than larger companies. Small and medium sized companies normally have a lower trading volume than larger companies, which may tend to make their market price fall more disproportionately than larger companies in response to selling pressures and may have limited markets, product lines, or financial resources and lack management experience.

The Fund invests in ETFs (Exchange-Traded Funds) and is therefore subject to the same risks as the underlying securities in which the ETF invests as well as entails higher expenses than if invested into the underlying ETF directly.

While the option overlay is intended to improve the Fund's performance, there is no guarantee that it will do so. Utilizing an option overlay strategy involves the risk that as the buyer of a put or call option, the Fund risks losing the entire premium invested in the option if the Fund does not exercise the option. Also, securities and options traded in over-the-counter markets may trade less frequently and in limited volumes and thus exhibit more volatility and liquidity risk.
