Before you invest, you may want to review the Fund's prospectus, which contains more information about the Fund and its risks. The Fund's prospectus and statement of additional information dated November 1, 2023, are incorporated by reference into this summary prospectus. You can obtain these documents and other information about the Fund online at www.simplify.us/etfs or by calling 1-855-772-8488.

These securities have not been approved or disapproved by the Securities and Exchange Commission nor has the Securities and Exchange Commission passed upon the accuracy or adequacy of this Prospectus. Any representation to the contrary is a criminal offense.

Shares of the Fund are listed and traded on the NYSE Arca, Inc.

FUND SUMMARY – SIMPLIFY AGGREGATE BOND ETF (formerly, Simplify Aggregate Bond PLUS Credit Hedge ETF)

Investment Objective: Simplify Aggregate Bond ETF (the “Fund” or “AGGH”) seeks to maximize total return.

Fees and Expenses of the Fund: This table describes the fees and expenses that you may pay if you buy, sell, and hold shares of the Fund. **Investors purchasing or selling shares of the Fund in the secondary market may be subject to costs (including customary brokerage commissions) charged by their broker. These costs are not included in the expense example below.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.50%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses ⁽¹⁾	0.01%
Acquired Fund Fees and Expenses ⁽²⁾	0.07%
Total Annual Fund Operating Expenses	0.58%
Fee Waiver ⁽³⁾	(0.25)%
Total Annual Fund Operating Expenses After Fee Waiver	0.33%

- (1) Other Expenses have been restated. The Fund no longer engages in transactions that incur interest expense.
- (2) Acquired Fund Fees and Expenses are the indirect costs of investing in other investment companies. The operating expenses in this fee table do not correlate to the expense ratio in the Fund’s financial highlights because the financial statements include only the direct operating expenses incurred by the Fund.
- (3) The Fund’s adviser has contractually agreed, through at least October 31, 2024, to waive its management fees to 0.25% of the Fund’s average daily net assets. This agreement may be terminated only by the Trust’s Board of Trustees on 60 days’ written notice to the Fund’s adviser.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in mutual funds and other exchange traded funds.

The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based upon these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$34	\$161	\$299	\$702

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund’s performance. During the most recent fiscal year, the Fund’s portfolio turnover rate was 400% of the average value of its portfolio.

Principal Investment Strategies: The adviser seeks to achieve the Fund’s investment objective by investing in investment grade bonds primarily by purchasing exchange traded funds and applying derivative overlays intended to hedge risk or generate income.

Bond Strategy

The Fund has adopted a non-fundamental investment policy that, under normal circumstances, the Fund will invest at least 80% of its net assets (plus any borrowings for investment purposes) in U.S. investment grade bonds primarily by purchasing exchange traded funds (“ETFs”).

The Fund pursues its strategy primarily by purchasing ETFs that invest principally in the U.S. investment grade bonds of the U.S. government, corporate issuers, and mortgage-backed securities (“MBS”). However, the Fund invests without restriction as to the credit quality, maturity, or duration of an individual security. The adviser does not frequently trade securities but seeks to maintain consistent exposure to such companies through its investments in ETFs. The adviser determines which ETFs to purchase based on factors such as price, liquidity, and track record. The adviser selects ETFs that are representative of an asset class (e.g., invests primarily in investment grade corporate bonds) and have a minimum five-year track record and adequate trading volume relative to the Fund’s size. The adviser considers trading volume adequate if it can buy and sell an ETF in a desired quantity without materially affecting its price.

The underlying ETFs that the Fund will invest in may target bonds with different maturities, durations, and quality requirements in connection with their investment strategies. Duration is a measure of price sensitivity of a debt security or a portfolio of debt securities to relative changes in interest rates. For instance, a duration of “five years” means that a security’s or portfolio’s price would be expected to decrease by approximately 5% with a 1% increase in interest rates (assuming a parallel shift in yield curve). Maturity is the period during which its owner will receive interest payments on the investment. When the bond reaches maturity, the Fund is repaid its par, or face value. A bond’s quality is a reference to the grade given to a bond by a rating service that indicates its credit quality. The rating takes into consideration a bond issuer’s financial strength or its ability to pay a bond’s principal and interest in a timely fashion. For instance, a “AAA” high-grade rated bond offers more security and lower profit potential (lower yield) than a “B-” rated speculative bond.

Derivatives Overlay-Generally

In total, the Fund may invest up to 20% of the Fund’s portfolio in derivatives (measured by purchase price in the case of options or collateral pledged in the case of other derivatives). The adviser anticipates purchasing and selling its derivatives on a monthly, quarterly, and annual basis, depending upon the Fund’s rebalancing requirements and expiration dates. However, the adviser may rebalance the Fund’s derivative portfolio on a more frequent basis for a number of reasons such as when market volatility renders the protection provided by the derivative strategy ineffective or a derivative position has appreciated to the point that it is prudent to decrease the Fund’s exposure and realize gains for the Fund’s shareholders. Derivatives may be exchange-traded or over-the-counter (“OTC”); index-based or linked to a specific security. The adviser selects derivatives based upon its evaluation of relative value based on expected hedging effectiveness, cost; and in the case of options, strike price (price that the option can be bought or sold by the option holder) and maturity (the last date the option contract is valid). The adviser will exercise or close the options based typically on maturity.

When the Fund purchases a call option, the Fund has the right, but not the obligation, to buy a stock or other asset at a specified price (strike price) within a specific time period. When the Fund purchases a put option, the Fund has the right, but not the obligation, to sell a stock or other asset at a specified price (strike price) within a specific time period. Futures contracts allow the buyer or seller to purchase or sell an asset at a future date. The Fund will invest in total return swaps that use investment grade or high yield debt instruments or investment grade or high yield indexes as reference assets and equity indexes or ETFs.

The Fund executes a portion of its derivatives overlay strategy indirectly by investing in a wholly-owned subsidiary. The Fund gains exposure to certain investments related to this strategy by investing up to 25% of its assets in a wholly-owned subsidiary of the Fund organized under the laws of the Cayman Islands (the “Subsidiary”). The Subsidiary is advised by the adviser. Unlike the Fund, the Subsidiary is not an investment company registered under the Investment Company Act of 1940, as amended (the “1940 Act”). The Fund’s investment in the Subsidiary is intended to provide the Fund with exposure to certain derivatives in accordance with applicable tax rules and regulations.

Derivatives Overlay-Hedge Strategy

The Fund may invest up to 20% of the Fund's portfolio in derivatives to hedge against interest rate risk and credit risk. The adviser uses long and short positions in futures, options, and swaps linked to equities, fixed income securities, volatility indices, commodities, and currencies to manage risk. When the adviser believes interest rates will be rising in general, or within a sector, it will hedge primarily by initiating short positions in interest rate-related futures, swaps, and or options. When the adviser believes credit risk will be increasing, it will hedge primarily by receiving protection through a credit default swap or a total return swap that uses investment grade or high yield debt instruments or investment grade or high yield index as the reference asset. However, when the adviser believes a short-term opportunity for a more-effective hedge is available, it may also use derivatives linked to equities, volatility indices, commodities (i.e., gold and oil), and currencies to manage interest rate and credit risk. The adviser closes derivative positions when it believes the related risk is no longer significant or to use a more efficient or cost-effective derivative.

Derivatives Overlay-Income Strategy

The Fund may invest up to 20% of the Fund's portfolio in derivatives to generate additional income. While derivative-based gains are considered capital gains under GAAP (generally accepted accounting principles) they are commonly described as income by securities market participants. When the adviser believes a put or call option presents insignificant risk, the Fund will write put and or call options with the expectation that they will expire worthless. As an alternative, when the adviser believes an option is not likely to expire worthless it may use put and call spreads. In a call option spread, the Fund sells (writes) an out of the money (above current market price) call option while also purchasing a call option that is further out of the money to partially offset the risk of the written option. In a put option spread, the Fund sells (writes) an out of money (below current market price) put option while also purchasing a put option that is further out of the money to partially offset the risk of the written option. The adviser may also use a combination of derivatives and cash equivalents as a substitute for a bond ETF when it generates more income. The adviser may also engage in reverse repurchase agreements and use the proceeds for investment purposes. Reverse repurchase agreements are contracts in which a seller of securities, for example, U.S. government securities, agrees to buy the securities back at a specified time and price. Reverse repurchase agreements are primarily used by the Fund as an indirect means of borrowing. When the Fund earns more on its additional investments than the interest cost related to the reverse repurchase agreement, it generates additional income.

Principal Investment Risks: *As with all funds, there is the risk that you could lose money through your investment in the Fund. Many factors affect the Fund's net asset value and price of shares and performance.*

The following describes the risks the Fund bears with respect to its investments. As with any fund, there is no guarantee that the Fund will achieve its goal.

Fixed Income Securities Risk. When the Fund invests in fixed income securities, the value of your investment in the Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities owned by the Fund. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities. Other risk factors include credit risk (the debtor may default), extension risk (an issuer may exercise its right to repay principal on a fixed rate obligation held by the Fund later than expected), and prepayment risk (the debtor may pay its obligation early, reducing the amount of interest payments). These risks could affect the value of a particular investment by the Fund, possibly causing the Fund's share price and total return to be reduced and fluctuate more than other types of investments.

Active Management Risk. The Fund is subject to the risk that the investment management strategy may not produce the intended results and may negatively impact Fund performance. The adviser's overlay strategy will not fully protect the Fund from declines in the market.

Commodity and Currency Risk. Investments linked to commodities or currencies can be highly volatile compared to investments in traditional securities, and may experience large losses. The value of instruments linked to commodities or currencies may be affected by market movements, commodity or currency benchmarks (as the case may be), volatility, changes in interest rates, or factors affecting a particular industry, commodity or currency. For example, commodities may be affected by numerous factors, including drought, floods, fires, weather, livestock disease, pipeline ruptures or spills, embargoes, tariffs and international, economic, political or regulatory developments.

Derivatives Risk. The use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) the risk that the counterparty to a derivative transaction may not fulfil its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, rate or index. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to: changing supply and demand relationships; government programs and policies; national and international political and economic events, changes in interest rates, inflation and deflation and changes in supply and demand relationships. Trading derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities.

Early Close/Trading Halt Risk. An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may prevent the Fund from buying or selling certain securities or financial instruments. In these circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and may incur substantial trading losses.

Equity Securities Risk. The net asset value of the Fund will fluctuate based on changes in the value of the equity securities that serve as reference assets to a total return swap held by the Fund. Equity prices can fall rapidly in response to developments affecting a specific company or industry, or to changing economic, political or market conditions.

ETF Structure Risks. The Fund is structured as an ETF and will invest in underlying ETFs. As a result, the Fund is subject to special risks, including:

- *Not Individually Redeemable.* The Fund's shares ("Shares") are not redeemable by retail investors and may be redeemed only by Authorized Participants at net asset value ("NAV") and only in Creation Units. A retail investor generally incurs brokerage costs when selling shares.
- *Trading Issues.* Trading in Shares on NYSE Arca, Inc. (the "Exchange") may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable, such as extraordinary market volatility. There can be no assurance that Shares will continue to meet the listing requirements of the Exchange which may result in the Shares being delisted. An active trading market for the Shares may not be developed or maintained. If the Shares are traded outside a collateralized settlement system, the number of financial institutions that can act as Authorized Participants that can post collateral on an agency basis is limited, which may limit the market for the Shares.
- *Market Price Variance Risk.* The market prices of Shares will fluctuate in response to changes in NAV and supply and demand for Shares and will include a "bid-ask spread" charged by the exchange specialists, market makers or other participants that trade the Shares. There may be times when the market price and the NAV vary significantly. This means that Shares may trade at a discount to NAV.
 - In times of market stress, market makers may step away from their role market making in the Shares and in executing trades, which can lead to differences between the market value of the Shares and the Fund's NAV.
 - The market price of the Shares may deviate from the Fund's NAV, particularly during times of market stress, with the result that investors may pay significantly more or significantly less for the Shares than the Fund's NAV, which is reflected in the bid and ask price for the Shares or in the closing price.
 - In stressed market conditions, the market for the Shares may become less liquid in response to the deteriorating liquidity of the Fund's portfolio. This adverse effect on the liquidity of the Shares may, in turn, lead to differences between the market value of the Shares and the Fund's NAV.

- *Authorized Participant Risk.* Only an Authorized Participant may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that may act as an Authorized Participant on an agency basis (i.e., on behalf of other market participants). To the extent that Authorized Participants exit the business or are unable to proceed with creation or redemption orders with respect to the Fund and no other Authorized Participant is able to step forward to create or redeem Creation Units, Fund shares may be more likely to trade at a premium or discount to net asset value and possibly face trading halts or delisting. Authorized Participant concentration risk may be heightened for securities or instruments that have lower trading volumes.

Futures Risk. The Fund's use of futures involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) leverage risk (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the futures contract may not correlate perfectly with the underlying index.

High Yield Risk. The Fund may invest in high yield bonds also known as "junk bonds". High yield securities and unrated securities of similar credit quality are subject to greater levels of credit, call and liquidity risks. High yield securities are considered primarily speculative with respect to the issuer's continuing ability to make principal and interest payments, and may be more volatile than higher-rated securities of similar maturity.

Large Capitalization Risk. Large-capitalization companies may be less able than smaller capitalization companies to adapt to changing market conditions. Large-capitalization companies may be more mature and subject to more limited growth potential compared with smaller capitalization companies. During different market cycles, the performance of large capitalization companies has trailed the overall performance of the broader securities markets.

Leverage Risk. The use of leverage by the Fund, such as the use of options, will cause the Fund to incur additional expenses and magnify the Fund's gains or losses. The Fund may borrow for investment purposes indirectly using reverse repurchase agreements. The cost of borrowing may reduce the Fund's return, increase the risk of loss and may increase the volatility of the Fund.

Limited History Risk. The Fund is a new ETF and has a limited history of operations for investors to evaluate.

Market and Geopolitical Risk. The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market. Securities in the Fund's portfolios may underperform due to inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters, pandemics, epidemics, terrorism, international conflicts, regulatory events and governmental or quasi-governmental actions. The occurrence of global events similar to those in recent years may result in market volatility and may have long term effects on both the U.S. and global financial markets. The novel coronavirus (COVID-19) global pandemic and the aggressive responses taken by many governments, including closing borders, restricting international and domestic travel, and the imposition of prolonged quarantines or similar restrictions, as well as the forced or voluntary closure of, or operational changes to, many retail and other businesses had negative impacts, and in many cases severe negative impacts, on markets worldwide. It is not known how long such impacts, or any future impacts of other significant events described above, will or would last, but there could be a prolonged period of global economic slowdown, which may impact your Fund investment.

Mortgage-Related Risks. MBS represent interests in "pools" of mortgages and often involve risks that are different from or possibly more acute than risks associated with other types of debt instruments. Generally, rising interest rates tend to extend the duration of fixed rate mortgage-related securities, making them more sensitive to changes in interest rates. As a result, in a period of rising interest rates, the Fund may exhibit additional volatility since individual mortgage holders are less likely to exercise prepayment options, thereby putting additional downward pressure on the value of these securities and potentially causing the Fund to lose money. When interest rates decline, borrowers may pay off their mortgages sooner than expected. This can reduce the returns of a Fund because the Fund may have to reinvest that money at the lower prevailing interest rates.

Option Risk. As the buyer of put and call options, the Fund risks losing the entire premium invested in the option if the Fund does not exercise the option.

Over-the-Counter Market Risk. Securities and options traded in over-the-counter markets may trade less frequently and in limited volumes and thus exhibit more volatility and liquidity risk, and the prices paid by the Fund in over-the-counter transactions may include an undisclosed dealer markup. The Fund is also exposed to default by the over-the-counter option writer who may be unwilling or unable to perform its contractual obligations to the Fund.

Subsidiary Investment Risk. Changes in the laws of the United States and/or the Cayman Islands, under which the Fund and the Subsidiary are organized, respectively, could result in the inability of the Fund to operate as intended and could negatively affect the Fund and its shareholders. The Subsidiary is not registered under the 1940 Act and is not subject to all the investor protections of the 1940 Act. Thus, the Fund, as an investor in the Subsidiary, will not have all the protections offered to investors in registered investment companies.

Swap Risk. Swaps are subject to tracking risk because they may not be perfect substitutes for the instruments they are intended to hedge or replace. Over the counter swaps are subject to counterparty default. Leverage inherent in derivatives will tend to magnify the Fund's losses.

U.S. Treasury Market Risk. The U.S. Treasury market can be volatile, and the value of instruments correlated with these markets may fluctuate dramatically from day to day. U.S. Treasury obligations may provide relatively lower returns than those of other securities. Similar to other debt instruments, U.S. Treasury obligations are subject to debt instrument risk and interest rate risk. In addition, changes to the financial condition or credit rating of the U.S. Government may cause the value of U.S. Treasury obligations to decline.

Underlying Fund Risk. ETFs in which the Fund invests are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. As a result, the cost of investing in the Fund will be higher than the cost of investing directly in the ETFs and may be higher than other funds that invest directly in stocks and bonds. Each of the ETFs is subject to its own specific risks, but the adviser expects the principal investments risks of such ETFs will be similar to the risks of investing in the Fund.

Performance: The Fund does not have performance history for a full calendar year. Once the Fund has completed a full calendar year of investment operations, this section will provide some indication of the risks of investing in the Fund by showing how the Fund's average annual returns compare with a broad measure of market performance. Past performance does not necessarily indicate how the Fund will perform in the future. Also, shareholder reports containing financial and performance information will be mailed to shareholder semi-annually. Updated performance information will be available at no cost by visiting www.simplify.us/etfs or by calling 1 (855) 772-8488.

Investment Adviser: Simplify Asset Management Inc. (the "Adviser").

Portfolio Managers: Paul Kim, Chief Executive Officer of the Adviser, and David Berns, Chief Investment Officer of the Adviser, have each served the Fund as a portfolio manager since it commenced operations in February 2022. Shailesh Gupta, Portfolio Manager and Head of Trading for the adviser has served the Fund as a portfolio manager since August 2023. Mr. Kim, Mr. Berns and Mr. Gupta are jointly and primarily responsible for the management of the Fund.

Purchase and Sale of Fund Shares: The Fund will issue and redeem Shares at NAV only in large blocks of 25,000 Shares (each block of Shares is called a "Creation Unit"). Creation Units are issued and redeemed primarily in-kind for securities but may include cash. Individual Shares may only be purchased and sold in secondary market transactions through brokers. Except when aggregated in Creation Units in transactions with Authorized Participants, the Shares are not redeemable securities of the Fund.

Shares of the Fund are listed for trading on the Exchange and trade at market prices rather than NAV. Shares of the Fund may trade at a price that is greater than, at, or less than NAV. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market.

Tax Information: The Fund's distributions generally will be taxable as ordinary income or long-term capital gains. A sale of Shares may result in capital gain or loss.

Payments to Broker-Dealers and Other Financial Intermediaries: If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.
