

# SPYC | Simplify US Equity PLUS Convexity ETF

## OVERVIEW

The **Simplify US Equity PLUS Convexity ETF (SPYC)** seeks to provide capital appreciation by offering US large cap exposure while aiming to boost performance during extreme market moves up or down via a systematic options overlay.

The fund's core holding gives investors low-cost, index-based exposure to US large caps. A modest option overlay budget is then deployed into a series of options positions that help create convexity in the fund.

## KEY POINTS

- Low-cost<sup>1</sup> US large cap index ETF exposure exposure is the main holding
- Modest and transparent option budget adds convexity to the core passive exposure
- Advanced options strategy is designed to be robust across a variety of extreme market conditions

<sup>1</sup>Normal Brokerage Fees Apply

## STRATEGY DESIGN

### Passive US Equity Exposure

- US large cap index ETF
- Potential quarterly dividend

### Advanced Options Overlay

- Potentially boost equity performance during extreme markets
- Modest option budget with no upside caps
- Designed to handle various types of market dislocations

## PAYOFF PROFILE

Downside Convexity attempts to increasingly boost performance as market declines deepen.

Upside Convexity attempts to increasingly boost performance as market rises increase.

## PORTFOLIO APPLICATIONS

- **Black Swan Hedge:** Extreme market moves are becoming more frequent.
- **Downside Mitigation Alternative:** Use to guard against extreme moves down in place of other common risk mitigation asset classes.
- **Enhanced Upside Without Overextending:** Capture the full potential of strong market melt-ups without going “up the risk curve.”

## DEFINITIONS:

**Convexity:** A measure of how the duration of a bond changes as interest rates change. The greater the convexity of a bond, the greater that change will be for a specific interest rate shift.

**Expiry:** The time until an option expires. In the context here expiry is used to describe the length of time from when an option position is initiated to when it will expire.

**Market Price:** The current price at which shares are bought and sold. Market returns are based upon the last trade price.

**NAV:** The dollar value of a single share, based on the value of the underlying assets of the fund minus its liabilities, divided by the number of shares outstanding. Calculated at the end of each business day.

## DEFINITIONS CONTINUED:

**Option:** An option is a contract that gives the buyer the right to either buy (in the case of a call option) or sell (in the case of a put option) an underlying asset at a pre-determined price ("strike") by a specific date ("expiry"). An "outright" is another name for a single option leg. A "spread" is when options are bought at one strike and an equal amount of options are sold at a different strike, all at the same expiry

**SEC 30-Day Yield:** The yield is calculated with a standardized formula and represents net investment income earned by a fund over a 30-day period, expressed as an annual percentage rate based on the fund's share price. The yield includes the effect of any fee waivers and/or reimbursements. Without waivers, yields would be reduced. This is also referred to as the "standardized yield", "30-Day Yield" and "Current Yield". The unsubsidized SEC 30-Day Yield does not reflect the effect of any fee waivers and/or expense reimbursements.

**S&P 500 Index:** The index includes 500 leading U.S. large cap companies and captures approximately 80% coverage of the available market.

## IMPORTANT INFORMATION:

**Investors should carefully consider the investment objectives, risks, charges, and expenses of Exchange Traded Funds (ETFs) before investing. To obtain an ETF's prospectus or Summary prospectus containing this and other important information, please call (855) 772-8488, or visit [SimplifyETFs.com](https://SimplifyETFs.com). Please read the prospectus carefully before you invest.**

**An investment in the fund involves risk, including possible loss of principal.**

The fund is actively-managed and is subject to the risk that the strategy may not produce the intended results.

The use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) the risk that the counterparty to a derivative transaction may not fulfill its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, rate, or index. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. The use of leverage by the Fund, such as borrowing money to purchase securities or the use of options, will cause the Fund to incur additional expenses and magnify the Fund's gains or losses. The earnings and prospects of small and medium sized companies are more volatile than larger companies and may experience higher failure rates than larger companies. Small and medium sized companies normally have a lower trading volume than larger companies, which may tend to make their market price fall more disproportionately than larger companies in response to selling pressures and may have limited markets, product lines, or financial resources and lack management experience.

The Fund invests in ETFs (Exchange-Traded Funds) and is therefore subject to the same risks as the underlying securities in which the ETF invests as well as entails higher expenses than if invested into the underlying ETF directly.

While the option overlay is intended to improve the Fund's performance, there is no guarantee that it will do so. Utilizing an option overlay strategy involves the risk that as the buyer of a put or call option, the Fund risks losing the entire premium invested in the option if the Fund does not exercise the option. Also, securities and options traded in over-the-counter markets may trade less frequently and in limited volumes and thus exhibit more volatility and liquidity risk.
